

## Security Management

### **Protect People, Assets, Reputation, and Value**

Kestrel helps clients develop integrated security management systems to cost-effectively and reasonably protect an organization's people, assets, reputation, and value.

We assist clients in the review of current security initiatives, the assessment of potential security gaps, vulnerabilities and hazards, and in overall security process improvement.

Kestrel worked with the American Chemistry Council and Synthetic Organic Chemical Manufacturers Association to develop training tools and templates about Responsible Care® management system elements. A Responsible Care management system is an integrated environmental, health and safety, and security management system.

In addition, we have hands-on experience conducting security vulnerability assessments and security management gap analysis using the assessment process endorsed by the American Chemistry Council.

### **Features and Benefits of Our Security Management Services Include:**

- Accurate asset attractiveness characterization for proper vulnerability analysis
- Identifying existing resources and processes to build upon what is already in place and to improve existing methods
- Tools to help consistently deploy and monitor compliance with policies and procedures
- Integrated ISMS to enhance existing management systems
- Training to foster positive security awareness by employees, suppliers and contractors
- Risk Analysis/ranking for allocation of limited resources upon identified countermeasures
- Business continuity planning to ensure sustained operations
